

ABSTRACT OF THE DISCLOSURE

A server for performing a process corresponding to requests from a plurality of clients that saves a user the trouble of setting an environment which is taken each time he/she moves to another client. An environment setting information storing section stores environment setting information regarding a client. A client specifying section specifies, in the case of a request for a process having been made from a predetermined client, the client which made the request. An environment setting section obtains environment setting information corresponding to a client specified by the client specifying section from the environment setting information storing section and sets the corresponding environment. A processing section performs a process corresponding to a request on the basis of an environment set by the environment setting section.
